

Proje Doküman

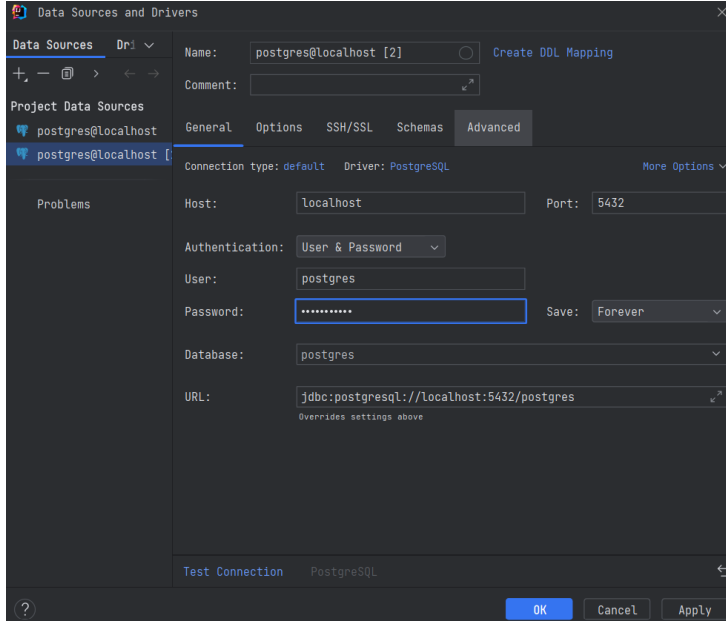

Projeyi ayağa kaldırmak

```
docker-compose.yml x
1 version: '3.1'
2
3 services:
4
5   db:
6     image: postgres
7     restart: always
8     ports:
9       - 5432:5432
10    environment:
11      POSTGRES_PASSWORD: benimSifrem
12
13   adminer:
14     image: adminer
15     restart: always
16     ports:
17       - 8080:8080
```

docker-compose.yml dosyasını services kısmından çalıştırın.

Data Source'den PostgreSQL kısmına tıklayın.

User ve Password girerek test edelim, apply ve OK diyelim.

Yapılanları localhost:8080'den de yapabilirsiniz.(adminer)

Projeyi ayağa kaldırılır ve tablolar görünür duruma gelir.

Proje dizayn:

- Controller
 - UserController
 - AddressController
- Entity
 - User
 - Address
- Enums
 - AddressType
- Repository
 - UserRepository
 - AddressRepository
- Service
 - UserService
 - AddressService
 - Impl
 - UserServiceImpl
 - AddressServiceImpl

Aşağıda yer alan API'ler:

User API

1. User Listele
2. İd'ye göre User Listele
3. User Sil
4. User Ekle
5. User Güncelle

Address API

1. Address Listele
2. İd'ye göre Address Listele
3. Address Sil
4. Address Ekle
5. Address Güncelle

- **UserController API'si(/api/users)**

User'ları Çekme

GET

getAllUsers → /api/users

Örnek Request:

GET	▼	localhost:8081/api/users
-----	---	--------------------------

Örnek Response:

```
[
  {
    "id": 4,
    "name": "Anil",
    "surname": "Acar"
  },
  {
    "id": 2,
    "name": "Kaya",
    "surname": "Acar"
  }
]
```

İd'ye göre User Çekme

GET

getUserById → /api/users/{userId}

Örnek Request:

GET	▼	localhost:8081/api/users/2
-----	---	----------------------------

Örnek Response:

```
{
  "id": 2,
  "name": "Kaya",
  "surname": "Acar"
}
```

User Sil

deleteUser → /api/users/{userId}

Örnek Request:

DELETE	▼	localhost:8081/api/users/3
--------	---	----------------------------

User Ekle

POST

createUser → /api/users

Request Body:

```
{
  "name": "String",
  "surname": "String",
  "address": {
    "id": 2
  }
}
```

Response Body:

```
[
  {
    "id": "1",
    "name": "String",
    "surname": "String",
  },
  {
    "id": "2",
    "surname": "String",
    "address": {
      "id": 3
    }
  }
]
```

Örnek Request:

GET

localhost:8081/api/users

```
{
  "name": "Burak",
  "surname": "Acar",
  "address": {
    "id": 2
  }
}
```

Örnek Response:

```
{
  "id": 2,
  "name": "Anil Burak",
  "surname": "Acar"
},
{
  "id": 4,
  "name": "Anil",
  "surname": "Acar"
}
```

User Güncelle

PUT

updateUser → /api/users/{userId}

Request Body:

```
{
  "name": "Anil Burak",
  "surname": "Acar",
  "address": {
    "id": 3
  }
}
```

Response Body:

```
{
  "id": "1",
  "name": "String",
  "surname": "String",
},
```

Örnek Request:

```
PUT    localhost:8081/api/users/2

{
  ... "name": "Kaya",
  ... "surname": "Acar",
  ... "address": {
    ... "id": 3
  }
}
```

Örnek Response:

```
{
  "id": 2,
  "name": "Kaya",
  "surname": "Acar"
}
```

- **AddressController API'si(/api/addresses)**

Address'leri Çekme

GET

getAllAddresses → /api/addresses

Örnek Request:

GET | localhost:8081/api/addresses

Örnek Response:

```
{
  "id": 1,
  "address": "Test1",
  "addressType": "DİGER",
  "active": true
},
{
  "id": 2,
  "address": "Test2",
  "addressType": "DİGER"
}
```

İd'ye göre Address Çekme

GET

getAddressById → /api/addresses/{addressId}

Örnek Request:

GET | localhost:8081/api/addresses/1

Örnek Response:

```
{
  "id": 1,
  "address": "Test1",
  "addressType": "DİGER",
  "active": true
}
```

Address Sil

deleteAddress → /api/addresses/{addressId}

Örnek Request:

DELETE | localhost:8081/api/addresses/1

Address Ekle

POST

createAddress → /api/addresses

Request Body:

```
{  
  "address": "String",  
  "addressType": "1",  
  "active": true  
}
```

Response Body:

```
{  
  "id": 5,  
  "address": "String",  
  "addressType": "enum",  
  "active": true  
}
```

Örnek Request:

POST

localhost:8081/api/addresses

```
{  
  "address": "TEST10",  
  "addressType": "1",  
  "active": true  
}
```

Örnek Response:

```
{  
  "id": 5,  
  "address": "TEST10",  
  "addressType": "IS_ADRESI",  
  "active": true  
}
```

Address Güncelle

PUT

updateAddress → /api/addresses/{addressId}

Request Body:

```
{
  "address": "String",
  "addressType": "1",
  "active": true
}
```

Response Body:

```
{
  "id": 5,
  "address": "String",
  "addressType": "enum",
  "active": true
}
```

Örnek Request:

PUT

▼

localhost:8081/api/addresses/5

```
{
  "address": "TEST85",
  "addressType": "1",
  "active": true
}
```

Örnek Response:

{

"id": 5,

"address": "TEST85",

"addressType": "IS_ADRESI",

"active": true

}
